Notes

For the DFDA product it is only available where fibres have been installed by Airband and part funded as part of Broadband Development UK (BDUK) contracts. A different pole attachment charge applies depending on whether the attached cable serves a single end-user (i.e. a single drop) or multiple end-users (i.e. a carrier cable). Customers can place equipment at the top of a pole providing there is space available and subject to the size constraints and engineering rules specified in the product description. A separate charge is levied for each cable that runs down or up a pole. The full charge will apply for cables that run part-way down the pole. If a single cable runs part-way down a pole and then loops back up the pole, a single cable-on-pole charge will apply. For the DFDA product there is a minimum term of 5 years from the date of installation. If the circuit is cancelled during this time the remaining rental charges for the first 12 months will be raised in full, with 20% of the remaining rental charges thereafter.
